APPENDIX B
WARE TYPES

Pottery fabric descriptions follow the system proposed by Oakeshott (1978: 59-61) with minor modifications. The principal ware types are:

**Fabric 1**: this is by far the most common type. Calcite is the main inclusion followed by basalt, quartz and grog, usually about 2mm in size. For convenience, Oakeshott's Fabric 1 has been divided into five categories, reflecting how well the fabric has been levigated, the size of the inclusions and so forth. Thus, very fine wares are referred to as ware type 1.1. Very coarse storage jars will probably be of ware type 1.5. Strictly speaking, "Negev ware" should also be included in Fabric 1, but to avoid confusion, it is kept as a separate category.

**Fabric 2**: this clay contains little calcite and basalt predominates. It is divided into 2a which contains quartz and 2b which does not. The fabric most usually occurs on Type B jugs at Buseirah.

**Fabric 3**: this is clay with a high silica content. Type 3a, with little calcite and much quartz, is rare. Type 3b is a white-firing ware and usually contains lime. It is characteristic of Type S bowls, Type D jugs and some lids. Type 3c is the highly siliceous fabric used for cooking pots, in which the filler consists principally of quartz.

These fabric types are used throughout the plate descriptions, supplemented by Munsell colour readings where available. The ware types appear to hold good across the whole of the Edomite plateau.
NOTES

1. (p. 3) Dornemann (1983) is the only other major work on the pottery of East Jordan. It is, however, concerned mainly with material from Amman and the Jordan Valley and is not particularly useful in a discussion of Edomite material.

3. (p. 10) As this work is concerned primarily with Edomite ceramic material and the chronological conclusions available from its study, data on faunal remains and on most small finds is not discussed here. Such matters will be covered in detail in the forthcoming final report.

4. (p. 20) Bennett is presumably referring to the so-called "Assyrian Open-Court Building" to which the structures in Area A and Area C bear some resemblance. Amiran and Dunayevsky (1958) suggest that the building was introduced into the Levant region by the Assyrians, based on Assyrian-Babylonian originals.

5. (p. 20) Many examples of this form are listed in Braemer's (1982) synthesis of the domestic architecture of Palestine. Note from Tell Beit Mirsim (Albright 1943, pl. 7) house NW 3/1; from Tell el Far'ah (de Vaux 1952 Fig. 10) house 176; and from Hazor (Yadin 1972 pp 179-181 and Yadin et al 1960) house 2a. In Jordan, the form occurs at Khirbet al-Medeiyineh (Olavarri 1977-78 and Sauer 1979) and, in a smaller form, at Tawilan house 4 (Fig. 4-2).

6. (p. 22) Some of the following material from Area D has been studied by Oakeshott (1978). That study is of little relevance here as it takes no account of stratigraphy and the postulated "phasing" (ibid. pp 78, 86) bears no resemblance to reality. In view of this her phasing of Areas A, B and C is ignored also. The pottery from it, being at the current state of study, essentially unstratified, is only referred to when individual examples have some inherent interest.

7. (p. 47) Some examples of Tawilan pottery are illustrated by Oakeshott (1978): Pls 42 - 52, with notes pp. 91 - 95. This thesis presents a more complete list, ordered within the modified classification system.

8. (p. 83) Site descriptions are kept to a minimum in this chapter as the main focus is on the pottery and the relative chronology. Fuller descriptions may be found in the forthcoming final report.
9. (p. 112) MacDonald's chronological system is not stated explicitly. The terminology suggests that Sauer's system (Sauer 1985, 1986) is being followed. For a discussion of the problems associated with this system see pp 128-129.
